the town of Milford to publish, on or before the fifteenth day of October, annually, a notice requiring all persons in the town liable to pay taxes, to brooders have just as high vitality and lay just as many eggs at the end of a three-year period as do those hatched and reared by hens. This was carried on long enough so that the results probably are pretty accurate.

With the use of brooders it is possible to save a great deal of labor by caring for the chickens in large flocks and also by careful disinfection to prevent the chicken lice from doins the damage which they always do when the chickens are cared for by mother hens. We are coming to realize more and more that it is important that chickens should be hatch-integers, while it may contain as high they owned on the first day of September. A like act applicable to the town of Stratford was also passed. The time for the extension of the ments found in swamps and meadows and spreading over the land is not a rapid process. Many have land which contains so-called peat or mucky soils charter privileges, was extended to December 1, 1916, and if twenty-five applied to land if it would not be a good fertilizer. Analysis of the material will show that the amount of available plant food would be in most cases were fittle. Being black in color one usually says that such soil is rich in portant that chickens should be hatch-integers. hand in lists of taxable property which

Bec. 2. Said conporation may, by a majority vote of its stockholders, issue not exceeding two bundred and fifty thousand dollars of the amount Politrymen can no longer feed whole wheat profitably. It will be necessary to feed as much corn as possible. As long as this situation lasts, it will be practical to feed % of a grain ration cracked corn and % equal parts by weight of barley and oats. Because corn is a grain high in carbohydrates and is therefore fat-forming and heatproducing. It will be necessary to feed the grains in a deep litter in order that the hens will exercise thoroughly to use up the energy provided by the surplus of corn.

Doing sway with the wheat in the ration will make it necessary to feed in the dry mash. It would be grain as praint to make a perfect soore by laying 10 sags made on the first pen of Rhode Island for the majority vote of its stockholders issue not exceeding two bundred and fifty thousand dollars of the amount of acceptance by section one in preferred stock which shall be entitled at Storys—Now in 16th Week.

brooders have just as high vitality year.

mother hens. We are coming to realize more and more that it is important that chickens should be hatched edearly and as many at the same time as possible. This is another very good reason, why we cannot depend upon hens for, hatching. Incubators always stand ready to take care of eggs when there is a sufficient number to put into them. Hens usually do not begin sitting early enough in large numbers to hatch many early chickens. Any farmer who cannot afford time to give an incubator proper attention may well look into the question of having his eggs hatched by some person who is well supplied with incubators who is able to run them scientifically and will hatch the eggs at a nominal price.
